Did you know?

The man behind masking, Dr Fauci:

Founder of MODERNA

Go Authored a Study in 2008 providing scientific evidence that over 30 MILLION people died due to a upper respiratory bacterial infection (Caused by masks) during the 1918 Spanish Flu Pandemic?

See Below:

"CONCLUSIONS: The majority of deaths in the 1918-1919 influenza pandemic likely resulted directly from secondary bacterial pneumonia caused by common upper respiratory-tract bacteria. Less substantial data from the subsequent 1957 and 1968 pandemics are consistent with these findings. If severe pandemic influenza is largely a problem of viral-bacterial co-pathogenesis, pandemic planning needs to go beyond addressing the viral cause alone (e.g., influenza Vaccines and antiviral drugs)."

CDC - Census NO INCREASE DUE TO COVID?

SARS-COV Patent: US7220852B1

2004 - Patent granted in 2007

It is Globally Illegal to:

- 1) Patent Nature
 - 2) Patent a Bio-Weapon
- (The CDC is being Sued)

SARS-COV 2 (Covid-19)

No patent exists

has yet to be seen isolated as a virus

2020 - CDC SENT "Covid-19 Samples" to 3 Different colleges to find cures

All 3 Colleges told the CDC the samples were inconclusive.

CDC Responds: That's the best we got

School Sues CDC...

Still no Isolated COVID-19 to study...

Inaccurate Testing (PCR TESTS) the cause of 97% of cases..

FALSE POSITIVES

The PCR test is so well known for giving inaccurate results that the CDC warns not to give the test to asymptomatic persons "because of the increased likelihood of false-positive results."

Chinese experts stated that if you're testing asymptomatic people with PCR, up to 80% of positives could be false positives. So they switched to "Anal Swabs"

Even The Journal of the American Medical Association recently published results of a study validating the gross inaccuracies of the PCR test. As former New York Times Reporter Alex Berenson (@Alex-Berenson) observed upon reading the results of the "JAMA" study:

"In other words, 97 percent of these patients had no live virus in their bodies despite a positive PCR test — and they were 18 percent of ALL the people surveyed (though they were not a random sample — they had had the virus before)."

Vaccine iconoclast Del Bigtree of TheHighwire.com observes that "at 33 cycles or amplifications, the PCR test is only 20 percent accurate or effective."

The FDA recommends 40 cycles, rendering the PCR test basically useless because all tests show positive.
